

# UDDERLY REVOLUTIONARY!

## UDDERLY REVOLUTIONARY!

Born in 1832, Anna Baldwin was a dairy farmer out of Newark, New Jersey. While much of her life is a mystery to us, there was one part of her life that was udderly revolutionary! Anna's invention of the Hygienic Glove Milker, allowing farmers to milk all four udders of the cow at once was a much faster and easier process than manually milking each udder. It worked through suction and was much less harmful to the cow than catheter style milking machines. She really knew how to milk the cash cow-putting in patents for methods to prepare butter, a milk separator and more!
